home to life

SafeGUARD
COMPOSITE DOORS

Our most popular door styles

For the full range visit our door designer... door-designer.co.uk/safeguard

Why SafeGuard?

SafeGuard composite doors are one of the UK's leading brands of residential doors, manufactured and assembled using only the best of components, you can rest assured these hand built doors are amongst the best available.

Exceptional Durability

High impact resistant glass reinforced polyester (GRP) skin that will maintain its pristine appearance.

Stunning Aesthetics

The woodgrain finish was developed from oak tree grain. You'll also find the same woodgrain effect and moulding design on the slim glazing cassette, giving a seamless and authentic finish.

Low Maintenance

Everything about our GRP composite door is designed to be easy to maintain - simply wipe clean with warm soapy water.

Read about door maintenance on page 51.

Excellent Weatherproofing

With water resistant polymer composite rails, our doors will keep the weather at bay and will stay looking great for longer.

Unparalleled Security

Our GRP composite doors offer enhanced security thanks to its rigid polymer sub-frame, high density insulated core and high impact resistant GRP skin. Rest assured that our doors are tried, tested and trusted, keeping you and your family safe.

See our hardware ranges on page 46 - 49.

Triple Glazed Glass

Our triple glazed, laminated as standard insulated glass units encapsulate the decorative glazing between two panes of clear glass, protecting it and making it easy to keep clean.

Read more about our glass on page 22.

Superb Sound Insulation

With a weighted noise reduction of 31 decibels it means you can be sure your new door will keep outside noise to a minimum.

See more technical information on page 50.

Look for the indicative rating on each page

When it comes to thermally efficient doors, a SafeGuard GRP composite door is the best choice you can make.

These days, we all worry about how much energy our homes use. The rising cost of our energy bills and our impact on the environment mean we want to keep our consumption to a minimum. One of the best ways to do this is to choose thermally efficient products that keep warmth in and cold out, saving money and emissions.

The alphabetical, colour coded scales shown in this brochure follow the same grading system as that found in white goods with 'A' representing the most energy efficient.

The testing shows the thermal efficiency of each of the doors. The darker the blue, the less heat is being lost. Reds and greens – the predominant colours on the timber door – indicate high heat loss.

Doors were tested at the University of Salford's Energy

House. This represents a typical Salford 1919 terraced house and its construction represents 21% of the UK's current housing stock.

The house has been reconstructed in a fully environmentally controllable chamber, in which climatic conditions can be maintained, varied, repeated and patterns monitored. For the test, the inside temperature of the Energy House was 25°C with an exterior temperature of 5°C.

Alnwick

Decorative backing glass and coloured glass

Alnwick Door in Premium Chartwell with Kara Grey Glass

Alnwick Door in Light Grey with Edwardian Glass

Alnwick Door in Duck Egg with Trieste Glass

Alnwick Door in Mouse Grey with Kara Green Glass

Alnwick Door in Steel Blue with Aspen Glass

Choose the Alnwick...

The twin top glazing adds sophistication to this already classic design whilst maintaining privacy and that feeling of security. For that ultimate feeling of security why not choose the Alnwick Solid with its six featured panels offering a safe and secure feeling to any home.

Rear Doors

Security for your property does not just rely on just your front entrance door. Your side and rear doors are equally as important. Safeguard supply a range of rear door options that come with the same class leading security as the front entrance door, but in styles more in keeping with that elevation of your home. These are some of the most popular designs.

For the full colour range see page 45

Sidelights

SafeGuard side panels have been designed to perfectly replicate the adjacent door and give your home the wow factor when installed.

Obscure Glass

We have various obscure glass options available, please ask your installer for more information.

Technical Figures

A SafeGuard GRP composite door has a wealth of facts and figures that prove its quality. The door:

- Reduces outdoor noise by an average of 31dB
- Achieves Global Warming Potential (GWP) score of less than 5
- Achieves Ozone Depletion Potential (ODP) score of zero
- The door leaf and glazing system are major components when part of a door set and have a proven ability to achieve PAS24:2016, industry's enhanced security standard, a prerequisite in attaining certification to Secured by Design a police initiative to protect against unlawful intrusion

Everything about a SafeGuard GRP composite door has been designed to enhance your home for years to come.

Care and Maintenance

To keep your door clean, prolong the life of the surface finish and protect your warranty, we recommend you wash it regularly using warm soapy water (washing up liquid is ideal) and a soft, lint-free cloth. If you live in a coastal area, in a heavily industrialised area or near a main road, you may need to clean your door more frequently.

It is important that you DO NOT use any of the following on your door:

- Abrasive cleaners or scouring pads
- Any type of bleach or solvent (e.g. white spirit, methylated spirit, cellulose thinners, acetone or nail varnish remover)
- Any type of adhesives or tack for providing temporary protection or fixing of seasonal or other decorations etc.
- High pressure or steam cleaners

Door Construction

Every SafeGuard GRP composite door is manufactured to the highest of standards to ensure it is strong, durable and secure. We have sold over four million doors to date, evidence of the quality and exacting specification we demand.

The door has a perimeter sub-frame of a solid, water-resistant polymer material, which is reinforced with Laminated Veneered Lumber (LVL). A thermoset GRP skin is bonded to this sub-frame and the core of the door is then filled with high density, 100% CFC-free polyurethane foam. Water resistant polymer composite rails protect the core from damage or water absorption and the high impact resistant thermoset GRP skin keeps your door looking great for longer!

The door's core is what makes it so thermally efficient and so good at reducing sound. In fact, it is the most thermally efficient door on the market, increasing your home's energy efficiency and saving you money on your energy bills.
